

Instagram Graph API

This file contains the variables queried for Instagram posts and media.

Returnable Fields for IG User

[IG User - Instagram Platform \(facebook.com\)](#)

```
biography*  
id*  
ig_id  
followers_count*  
follows_count  
media_count*  
name  
profile_picture_url  
username*  
website*
```

Fields marked with an asterisk (*) are public fields, which means they can be returned by an edge using field expansion.

Returnable Fields for IG Media ([IG Media - Instagram Platform \(facebook.com\)](#))

Field	Description
<code>caption</code> <i>Public</i>	Caption. Excludes album children. @ symbol excluded unless the app user can perform admin-equivalent tasks on the Facebook Page connected to the Instagram account used to create the caption.
<code>comments_count</code> <i>Public</i>	Count of comments on the media. Excludes comments on album child media and the media's caption. Includes replies on comments.
<code>id</code>	Media ID.

Public

`ig_id`

Instagram media ID.

`is_comment_enabled`

Indicates if comments are enabled or disabled. Excludes album children.

`like_count`

Public

Count of likes on the media. Excludes likes on album child media and likes on promoted posts created from the media. Includes replies on comments. If queried indirectly through another endpoint or field expansion, value will be 0 if the media owner has [hidden](#) like counts it.

`media_product_type`

Public

Surface where the media is published. Can be [AD](#), [FEED](#), [IGTV](#), or [STORY](#).

`media_type`

Media type. Can be [CAROUSEL_ALBUM](#), [IMAGE](#), or [VIDEO](#).

`media_url`

Public

Media URL. Will be omitted from responses if the media contains copyrighted material, or has been flagged for a copyright violation.

`owner`

ID of Instagram user who created the media. Only returned if the app user making the query also created the media, otherwise [username](#) field will be returned instead.

`permalink`

Public

Permanent URL to the media.

<code>shortcode</code>	Shortcode to the media.
<code>thumbnail_url</code>	Media thumbnail URL. Only available on <code>VIDEO</code> media.
<code>timestamp</code> <i>Public</i>	ISO 8601 formatted creation date in UTC (default is UTC ±00:00)
<code>username</code> <i>Public</i>	Username of user who created the media.
<code>video_title</code> <i>Public</i>	IGTV media title.
